

NOT A **BRIGHT** IDEA

Laser illuminations can distract, disorient and debilitate a pilot. An event occurring during a critical phase of flight, such as landing, can lead to catastrophic results if the pilot cannot see instruments to remain on course or maneuver in a heavy traffic environment.

Lasing a member of the aircrew will have adverse physiological effects to include visual pain and loss of depth perception.

Laser aiming at an aircraft is a federal crime. Violators can be charged with up to five years in prison and a \$250,000 fine.

If you have information about a lasing incident or see someone pointing a laser at an aircraft, call the Honolulu Police Department by dialing 911 or report it by email to the Federal Aviation Administration through laserreports@faa.gov.
